

Title: Location based news website

For design we select, <https://news.google.com> , initially it will be for 10 to 15 countries, there will be the section Local News as google has now, it will contain the viewer's country's news also on their language, they can change it to English if they want, we can use multilingual plugin for those language conversion. For each country we will use their newspaper's rss feed to show the Local News. Admin will paste the newspaper's URL as right now have several plugins for this.

On the left and right section admin will add contents like categories or other news feed as google designed, also local news, weather forecast as google news.

'For You' section, viewers can login to the website and read news and based on their selection, 'For You' section will show news feed for that viewer. Users can login via Gmail, Facebook and email signup. We can use a modal here for the login and signup.

Along with desktop version, we will need it to be mobile and tablet friendly.
