

Title: Customize WooCommerce Ajax Product Filter

Price: \$40

We are using YITH WooCommerce Ajax Product Filter for categories color variant in our WordPress WooCommerce website. If one color variant is named as "Red", we can only select one color for this variant "Red", but we need to have add multiple color for single color variant. You can set "Add Color" button on the widget section of YITH WooCommerce Ajax Product Filter, after clicking on it admin can add another color code/ color and so on.(As much as admin wants).

Selected candidates will work on subdomain and after completing the task have to provide the documentation of implementing it on other websites. If faced any problem, need to assist on 2 websites as well.

We are looking for long term plugin customizer.
